FOR IMMEDIATE RELEASE

RSA Security Conference: Password-Less Login Leader, LogMeOnce Announces Feature-Rich Version 6.3 with Comprehensive Security Platform

LogMeOnce innovations hit grand slam with Version 6.3, featuring Password SHOCK©, Account Freeze, and Scheduled Login, to offer further protections of digital assets and identities.

WASHINGTON, D.C., April 16, 2018—LogMeOnce, the distinctive market leader in passwordless authentication, unveiled today the LogMeOnce version 6.3, an innovative, patent-pending Password & Identity Management platform designed to help consumers and businesses protect their passwords and security credentials, and manage against cyberattacks. The new version 6.3 puts you in control of your various accounts, digital security and identity, and adds multiple new security layers to the already feature-rich LogMeOnce product.

In addition to enhancements for passwordless selfie authentication (PhotoLogin), LogMeOnce Feature-Rich Security Platform includes Password SHOCK©, Account Freeze, and Scheduled Login.

Only LogMeOnce offers a comprehensive number of login options with automatic Two-Factor Authentication (2FA). You always get the extra security layer of 2FA without the hassle of typing yet another password or SMS code, or using a hardware 2FA token. You get instant protection and instant access to your computer via your mobile device (LogMeOnce protects identities on Apple iOS, Android, Microsoft Windows, Mac OS, and Linux).

"Although innovation is expensive, LogMeOnce has continued to enrich Version 6.3 with numerous unrivaled features. Developing unrivaled products is risky and tightens the squeeze on existing resources. And it requires two important elements: the ability to innovate and execute," says Kevin Shahbazi, CEO of LogMeOnce. "It's not surprising then why software vendors tend to make only incremental changes to existing products and keep a simple focus with every new version. We have seen this time and again in this space, where vendors have traditionally only focused on password management. At LogMeOnce, we pay attention to passwords AND the many unique features our users need to protect their information and accounts."

With PhotoLogin, your latest selfie becomes your login and includes dynamic authentication factors tied to the temporary picture (the photo is discarded once you confirm your identity). It's

simple: You get to easily access your account through your trusted mobile device. No more worries about duplicate, weak passwords or keyloggers stealing your passwords. LogMeOnce version 6.3 is streamlined and accelerates information share between trusted users. With a beautiful interface and an entirely new design, version 6.3 includes the following features:

- Password Management
- Password SHOCK$^©$
- Account Freeze
- Scheduled Login
- PasswordLess PhotoLogin
- LogMeOnce Mugshot
- Smart Menu
- Centralized Desktop & Mobile Dashboards
- Productivity Dock
- Application Catalogue
- Mobile Device Management (MDM)
- Comprehensive 1FA, 2FA, and MFA offerings
- Anti-Lock
- Kill-Pill
- Visual OTP
- Anti-Theft
- Selfie–2FA

Interested parties are welcome to take advantage of the LogMeOnce partner program and OEM licensing. As a "zero-knowledge" technology company, LogMeOnce does not know a user's encryption key or actual passwords. With LogmeOnce, *you* are the only one who has absolute knowledge of your actual password and encryption key—only you can decrypt your account.

About LogMeOnce:
Founded in 2010, the award-winning LogMeOnce confidently helps consumers and businesses protect their passwords, identity, and data. LogMeOnce rose to popularity with its feature-rich password management platform, and then with its patented PhotoLogin technology that gave users the choice of logging in with a password-less selfie. LogMeOnce innovations include a wide range of products, productivity solutions, and cryptographic and e-security applications. LogMeOnce industry distinctions include over 48 additional unrivaled products such as patent-pending Password SHOCK$^©$, Mugshot, Scheduled Login, Account Freeze, Password Dialer, Kill-Pill, Anti-Theft, and Live Password Tracker. Additionally, LogMeOnce Drive helps to extend security and encryption to cloud storage applications such as Dropbox, iCloud, and more. As serial entrepreneurs, the LogMeOnce management team has founded and scaled up to global brand status multiple startups, with successful exits and acquisitions, such as the acquisition by security industry leaders McAfee and Intel Corp. in 2010.

LogMeOnce is headquartered in Washington, D.C., and serves the global market with an additional location in Barcelona, Spain. LogMeOnce markets and sells its solutions worldwide

directly and through a variety of partners.
